

Comprehensive Protection and Governance for Microsoft Teams

The growth in workplace instant messaging only accelerated during the pandemic, which also increased business' need to manage more communication channels and data. Like email, instant messaging channels can contain records that could be used for critical compliance, legal e-discovery, and other records management needs. From a governance standpoint, collaboration platforms represent an enormous store of loosely managed data sets. Having to identify governance related content while adhering to compliance mandates and regulation is challenging when attempting to manage multiple content types that are distributed beyond the organizations boundaries and fragmented across multiple cloud silos.

Enter Mimecast Archive for Microsoft Teams. Discover, investigate, export and protect data from internal and external threats. **Whether you're in IT, SecOps, Legal, or Compliance, Archive for Microsoft Teams helps you:**

- Add a layer of redundancy by having Mimecast sync and store your data
- Apply a unique retention policy for Teams data
- Provide a single place to search both email and Teams messages
- Ensure compliance and reduced risk when employees communicate
- Scan files to safeguard your archive
- Export Teams data when needed for investigation or compliance (i.e., Data subject access requests)

Reduce the cost and complexity of archiving, governance, and compliance.

As the adoption of Microsoft Teams continues to grow, so will the risks associated with it. Take advantage of the Microsoft Suite to extend security, governance, and compliance to this new vertical.
