

Human-centric AI-Powered Attacks: The New Reality of Business Email Compromise

The threat landscape shows a rise in messaging and human-centric risks:

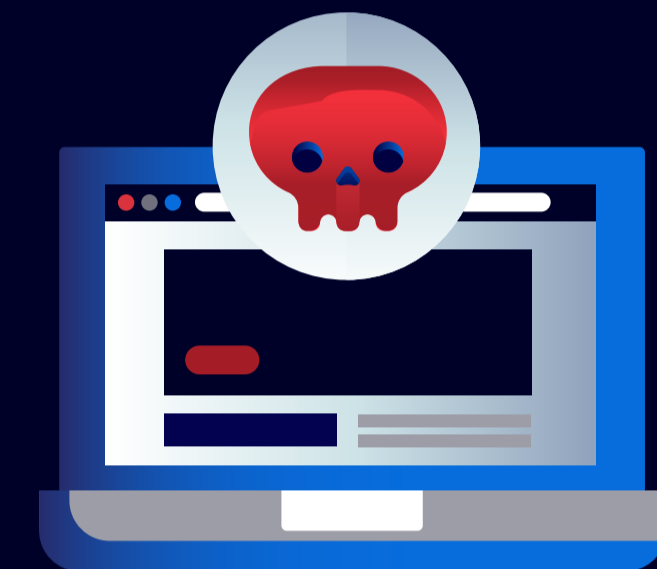

More Payloadless Attacks

Attackers are using fewer payloads from email attachments in their messaging attacks, relying on malicious links and complex obfuscation.

Increase of 40 Targeted Threats Per User

40 TPUs: Small businesses saw a steep increase in targeted threats per user.

1.6 Million Emails Attacks Delivered

1.6 million emails: Using Microsoft distribution lists, attackers delivered 1.6 million email messages backed by AI bot call centers.

Evolving threats using generative AI and machine learning are improving the targeting and content of attack campaigns, requiring even more advanced detection to protect businesses.
