

Mimecast Simply Migrate

Migrate your data quickly and efficiently with Mimecast's Simply Migrate solution.

The Problem

Many organizations are burdened with legacy archiving solutions that cannot keep pace with evolving business, e-discovery, and compliance requirements. The major barrier to adopting modern solutions is the complexity and cost of data migration, which involves significant up-front costs, time, and resource allocation. This often leads to inertia, with organizations opting to maintain the status quo rather than embark on a migration path.

The Solution

Mimecast Simply Migrate offers a fast and efficient data migration solution, enabling organizations to transition to the Mimecast Cloud Archive (MCA) more quickly than traditional methods. Its unique architecture and integration with MCA eliminate the need for time-consuming drive shipping, leveraging on-site technology resources for data extraction and movement. Simply Migrate supports a wide range of legacy archive vendors, simplifying the migration process and reducing the need for extensive training.

UP TO \$10,000 PER TB SAVED

Historically, legacy data migrations could cost as much as \$10,000 per terabyte migrated.
