

Security That Closes the Gaps Knowbe4 Leaves Open.

KnowBe4 trains people and hopes they won't click. Mimecast protects your organization even when they do – connecting email security, adaptive training, and behavioral controls in one platform so your human risk data actually talks to your security controls.

255%

More BEC and credential phishing caught – 3x more detection across 24 trillion data points

42,000+

Organizations trust Mimecast to protect their people and data

350+

Native integrations across your security stack – CrowdStrike, Okta, SentinelOne, Splunk and more

The Difference

Where KnowBe4 relies on fragmented, separate solutions, Mimecast delivers native integration across every layer of human risk — email security, adaptive training, and behavioral controls that work together from day one.

MIMECAST

Security Behavior Management: adaptive intervention and training based on real security behaviors

Adaptive Security Policies: risk posture adjusts automatically — tighter controls for risky users, streamlined for low-risk

Polymorphic malware detection — sandboxing, URL/QR scanning, advanced BEC detection, computer vision AI to identify credential harvesting— not entirely dependent on EOP/Defender alone

MX or API deployment — same detection engine, full flexibility

18 HRCC integrations (CrowdStrike, SentinelOne, Okta) with unified risk score + 350+ platform-wide integrations

KNOWBE4

HRM+ combines two separately licensed products — Egress and KnowBe4 SAT — integrated at the dashboard layer only

1,300+ modules — many over a decade old — no clear signal guiding which training reduces breach risk

Limited malware sandboxing — static, signature-based AV only; relies on EOP & Defender for O365

API-only alongside Microsoft/Google — no MX option; stagnant R&D post-acquisition

Limited cross-stack human risk score aggregation — no unified view across EDR, IAM, and Cloud Security signals

“Mimecast has been with us for as long as I’ve been here, and it consistently outperforms competitors in terms of security, functionality, and customer success.”
Peter Donnelly, Group Head of IT, Keystone
