

Work Protected

World-class protection for the intersection of communications, people, and data

Your work surface is now your risk surface

Email and collaboration are where work happens — they're also where risk is concentrated. Mass consolidation on a handful of cloud platforms like Microsoft 365 and Google Workspace has created irresistible targets; and malicious actors target them relentlessly, using the top attack vector — email — to deliver everything from phishing to ransomware.

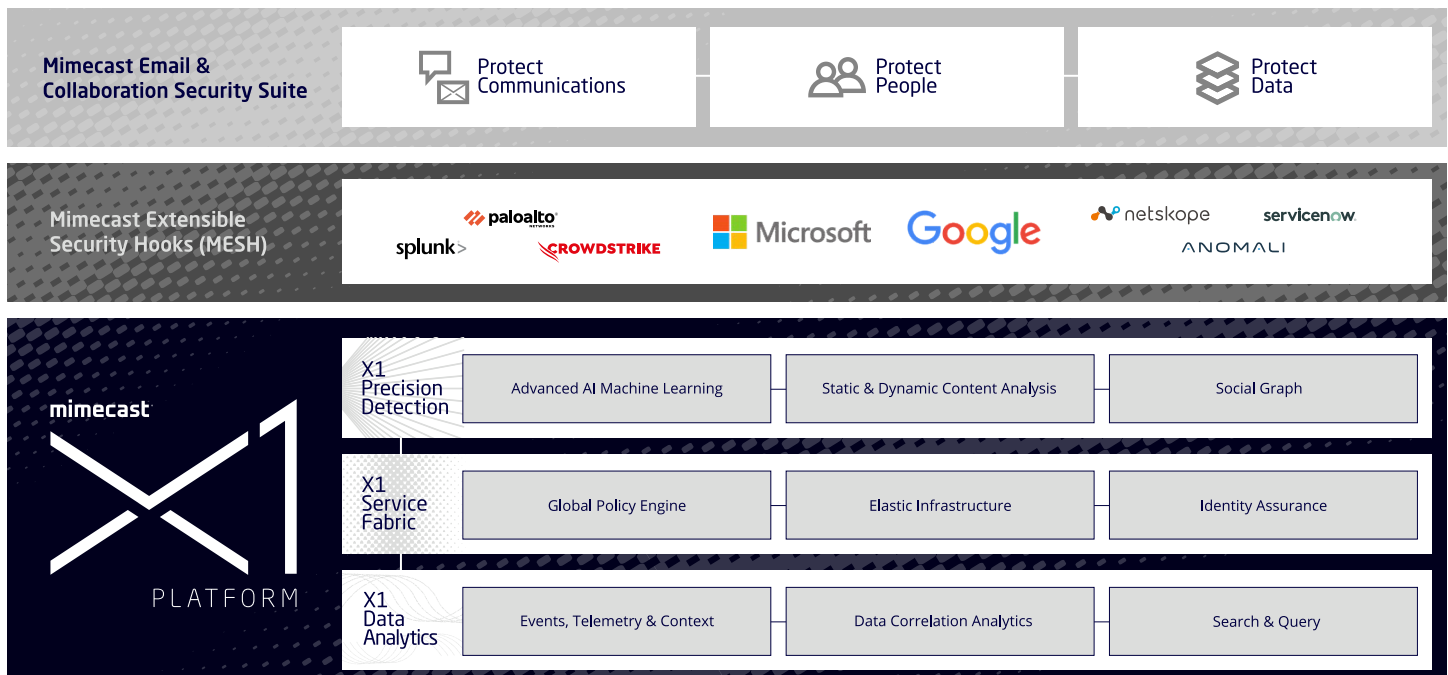

And they count on a key constant to achieve their aims — the propensity of humans to make mistakes. It's no surprise that 91% of cyberattacks start with email or that 94% of successful breaches involve some form of human error.

At the same time, technology is not infallible. Our total dependence on it makes organizations more vulnerable than ever.

How has the security industry responded to these challenges? By creating a complex web of point products designed to address critical areas of risk. However, this approach has generated a level of complexity that's untenable. Put simply, IT and security teams are spending more time managing technology than risk.

Your security x-factor

How can security and IT teams control risk without increasing complexity? Enter the Mimecast X1 Platform, which is the foundation of the Mimecast system. Allowing Mimecast’s products to work seamlessly together, it powers a fully integrated suite for keeping communications, people, and data protected, while delivering the rapid innovation, resilience, scale, and actionable information needed to navigate an ever-evolving threat landscape.

Precision Detection

Delivers advanced protection for the top attack vector – email – by leveraging the industry’s most robust view of the email threat landscape in combination with AI, Machine Learning, and Social Graphing for continuous end user protection.

Service Fabric

The foundation and infrastructure behind the Mimecast X1 platform that provides scalability, resilience, and the ability to rapidly deploy new enhancements in response to a constantly evolving threat landscape.

Data Analytics

A platform for ingesting, correlating, and querying the mass volumes of data that Mimecast generates from the process of protecting communications, people, and data.

MESH

Mimecast Extensible Security Hooks

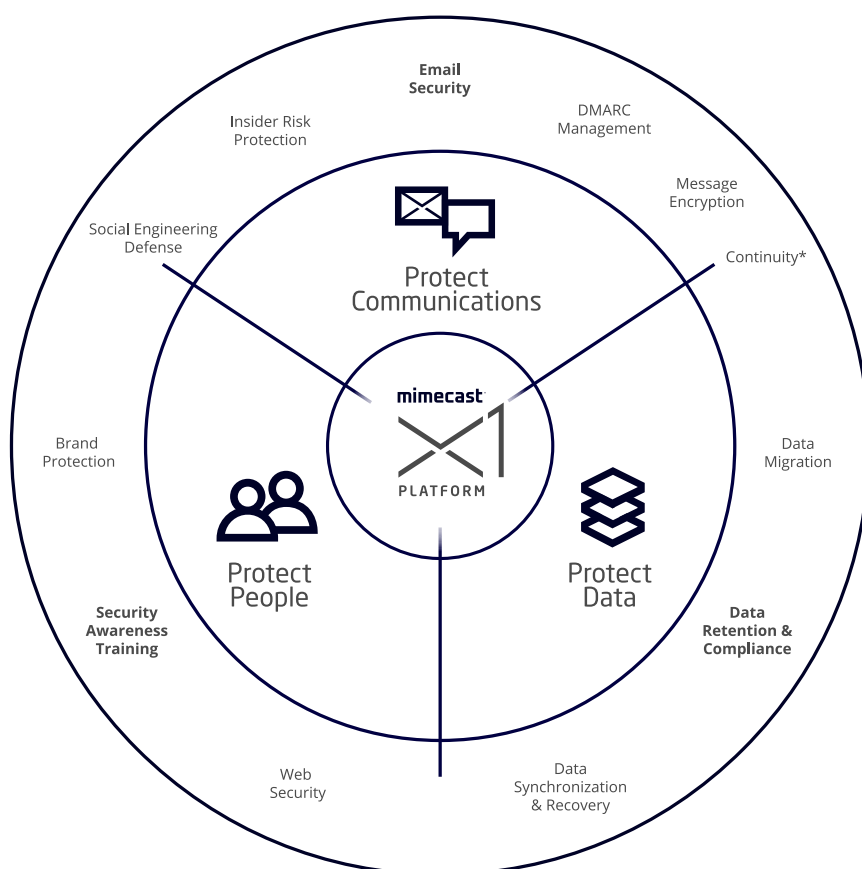

Provides a well-documented, consistent API gateway that enables third-party integrations of all kinds, delivering full extensibility and allowing threat data, policies, and practices to be applied or shared programmatically with other security and data solutions. MESH also supports accelerated integration with other security tools, such as SIEM, SOAR, XDR, CASB, and more.

THIS is how you work protected

The intersection of communications, people, and data carries a tremendous amount of risk, as malicious actors work to exploit the interconnectedness of the modern work surface. Multi-stage, multi-vector attacks have become the norm, with criminals using one entry point to open the door to others. Incidents, mistakes, and failures can have a devastating domino effect.

If only you had one problem to solve or a single attack vector to defend. The reality is that you have to do more. That's why Mimecast does more too. Our fully integrated product suite — powered by the X1 Platform — delivers a whole that's far greater than the sum of its parts, turning email and collaboration protection into the eyes and ears of your security organization.

The result? You can protect the key intersection of communications, people, and data in the simplest, most effective, and affordable way possible.

Protect Communications

Your work surface is now your risk surface, with email serving as the entry point for 91% of cyberattacks. Block even the most sophisticated email threats, keep email flowing no matter what, and trust your communications again with the Mimecast Product Suite.

Protect People

When successful cyberattacks are analyzed, they typically have one thing in common — human error. Create security savvy employees and surround them with protection all the way down to the point of risk with the Mimecast Product Suite.

Protect Data

Companies today are deluged with unstructured data that must be made searchable, secure, and compliant. Simplify compliance, accelerate e-Discovery, and keep data safe with the Mimecast Product Suite.

Protect Communications

Trust your communications again with best-in-class email security

World-class email security with total deployment flexibility

As the top attack vector, email demands the strongest possible protection. Defend against the most sophisticated attacks and stay one step ahead of threats with Mimecast Email Security. From phishing and ransomware to social engineering and credential harvesting, we block the most dangerous attacks, delivering world-class email security in the way that best meets your needs — with or without a gateway.

Block all email-based threats

By applying the right detection capabilities at the right time, Mimecast Email Security surrounds your communications with continuous protection. The industry's most robust view of the email threat landscape — derived from Mimecast's inspection of 1.3 billion emails daily — powers instantaneous blocking of the vast majority of email-based attacks, while the latest in AI and Machine Learning provides intelligent detection of both emerging and unknown threat types.

- World-class efficacy
- AI and Machine Learning powered detection
- Total deployment flexibility
- Comprehensive solution suite
- Rapid time to protection
- Extensible platform, open API

Enhance and extend protections

Bolster your email security protections without adding complexity with fully integrated, complementary solutions.

Social Engineering Defense

Empower users with AI-driven warning banners surfaced and updated in real time based on risk.

DMARC Management

Get full visibility and control of who sends emails on your behalf by accelerating and simplifying implementation of the DMARC protocol.

Email Continuity

Keep email flowing during planned or unplanned outages, providing uninterrupted access to current and historic email across devices.

Message Encryption

Let users securely send sensitive information with message encryption that's easy for them to use and simple for you to administer.

Insider Risk Protection

Prevent attacks from spreading internally and to your supply chain by applying best-practice inspections to internal and outbound email.

World-class efficacy, total deployment flexibility

No two organizations are alike. That's why Mimecast gives you the best email protection in the industry, with two different deployment options designed to meet varying requirements. Whether your environment is large or small, complex or straightforward, well-resourced or lean and mean, Mimecast delivers world-class email security efficacy in the way that best meets your needs.

Which solution is right for you?

Email Security, Cloud Integrated - Coming soon

An Integrated Cloud Email Security solution that does not require an MX record change, Email Security, Cloud Integrated is purpose-built to enhance and extend M365 protections. Deploying in just minutes and providing optimized protections out of the box, it's the ideal solution for IT and security teams that want to bolster M365 protection while making email security administration a snap.

- Optimized M365 protections
- Deployment in minutes (no MX record change)
- Protection for a single email tenant
- Out-of-the-box settings
- Minimal configuration
- Simplified administration
- One-click remediation
- Extensibility through an open API

Email Security, Cloud Gateway

A Secure Email Gateway in the cloud, Email Security, Cloud Gateway is designed to keep any type of email environment, even the most complex, secure. Offering advanced administration capabilities and a broad range of complementary solutions and integrations, it's the ideal solution for IT and security teams that want to control risk while also taming complexity.

- Optimized protections for any email environment (M365, Google Workspace, hybrid, on-premise)
- Support for large and complex environments (FAA, AAA)
- Highly customizable policies
- Simplified integration with other security tools, such as SIEM, SOAR, TIP, XDR, and more.
- Integrated, complementary solutions (Continuity, Archive, DMARC, and more)

World-class email security efficacy

AI-powered detection

Email security trusted by 40K customers globally

Protect People

Create security savvy employees with solutions that educate and empower

Security awareness training

Mimecast's award-winning Security Awareness Training platform helps you create new allies in the battle to work protected. Fully integrated with Mimecast Email Security, it creates a continuous cycle of training, testing, risk assessment, and support, allowing you to raise awareness across the organization while providing targeted support to those who need it most.

- Award-winning video-based training
- Micro-learning approach
- Robust and regularly refreshed content library
- Employee and organizational risk scoring
- Real-life phish testing, using attacks that targeted employees in the real-world
- Integrated email security controls

Enhance and extend protections

Take people protections a step further with solutions that secure more components of their day-to-day online experience.

Web Security

Protect your employees from malicious and inappropriate websites with a 100% cloud-based service that integrates with Mimecast Email Security for consistent cyber protection.

Brand Protection

Safeguard your digital brand to protect employees, customers, and partners by identifying and blocking brand impersonation attacks that exploit your digital brand.

"I've been involved with enterprise security awareness for decades and have barely found anything as compelling and fun as the content from Mimecast."

William Hammersla, Fmr CSO, Forcepoint and Fmr President, Raytheon Cyber Products

Protect Data

Make data safe, compliant, and easily discoverable

Data retention

Mimecast Data Retention brings today's data challenges down to size by simplifying compliance, dramatically reducing the time and cost of e-discovery searches, and ensuring data is never lost. A 7x Gartner Magic Quadrant leader that's fully integrated with Mimecast Email Security, our Cloud Archive solution meets the needs of a wide variety of stakeholders, from legal and compliance to IT, HR, and end users.

- Accelerated e-Discovery
- Simplified compliance
- Easy-to-use, self-service tools for end users
- Painless data migration
- Bottomless, immutable storage

Enhance and extend protections

Surround your data with tools that enhance manageability and protection.

Supervision

Reduce the risk and complexity of navigating dynamic corporate and regulatory requirements, while controlling audit readiness.

Data Migration

Reduce the time, cost, and complexity of shifting away from outdated archive systems by dramatically streamlining and accelerating the transfer of legacy data.

Archive for Microsoft Teams

Enforce security and compliance controls with best of breed governance and archiving to reduce risk for the way people work today.

Data Synchronization and Recovery

Manage compliance archiving and data resilience from a single, easily searched Administration Console, without the need for dedicated backup and recovery solutions.

Mimecast: Work Protected™

Since 2003, Mimecast has stopped bad things from happening to good organizations by enabling them to work protected. We empower more than 40,000 customers to help mitigate risk and manage complexities across a threat landscape driven by malicious cyberattacks, human error, and technology fallibility. Our advanced solutions provide the proactive threat detection, brand protection, awareness training, and data retention capabilities that evolving workplaces need today. Mimecast solutions are designed to transform email and collaboration security into the eyes and ears of organizations worldwide.
