

5 Big Wins

to drive your budget for Insider Risk Management

Security teams saw these value sources in a **4-week free data security assessment**.
Get your own assessment — you'll be amazed by what you discover.

Replace your CASB and save money

In one assessment Incydr™ caught everything Netskope caught — and more. **Get a better view of endpoint and cloud app risk without proxies or TLS inspection. Big win.**

Spot secret moonlighters

People working two or more jobs put you at risk and breach their contracts. **Incydr™ value proofs often spot moonlighters (including remote workers) so you can act.**

Spot source code theft

See when devs or departing employees push valuable code to Git or upload it to a cloud drive. **One team saw 71 files extricated to Google Drive on day one!**

Block intentional media leaks

Sensitive financial data. Leaked launch plans. This stuff hurts. **One Incydr user spotted a leaky executive using personal email to cause real damage.**

See through dirty tricks

Zipping and renaming files. Changing extensions. Weird printer use. All potential signs of employees covering their tracks. **One data assessment exercise caught a marketer sending out critical plans just before resigning.**

Now THAT'S how you secure a budget for Insider Risk Protection.

Security teams get a free data security assessment invariably find activities like these. Give us a few weeks and about four hours of engagement with us — we'll give you an airtight business case.

Let's do this. **[Click to request your Incydr data security assessment.](#)**
