8 Data-driven Wins
to Unlock Budget & Buy-in

Build your case for Human Risk Management.
With REAL RESULTS from Mimecast's Human Risk Management Platform.

Replace legacy tools and save big
01.

15% of critical risk indicators uncovered – existing standalone tools missed these, but a platform approach exposed gaps in endpoint and cloud app visibility, all without proxies or TLS inspection.

Flag risky employees
02.

3% of employees flagged for working multiple jobs, breaching contracts, and exposing sensitive data – early identification of these risks saved millions in damages.

Detect source code exfiltration
03.

86% of security leaders feared employees were leaking data to GenAI tools. Protecting intellectual property started with platform-level visibility into developer activity.

Prevent costly media leaks
04.

1 high-ranking executive stopped from leaking sensitive financial data via personal email. Early detection of these behaviors prevented reputational and financial fallout.

Expose hidden data exfiltration tactics
05.

64% of security pros were challenged when identifying data movement between personal and corporate domains. Spotting these patterns helped mitigate insider threats.

Reduce sensitive data events
06.

73% reduction in incidents - a global pharmaceutical manufacturer dramatically improved sensitive data handling.

Avoid phishing risks
07.

70% fewer phishing clicks – the same organization reported a major drop in phishing risk.

BONUS: Proven ROI
08.

255% return on investment over 3 years with Mimecast email security.

Ready to build your business case?

Uncover your greatest sources of risk from repeat offenders, data mishandlers, and those who are highly attacked, with actionable insights, and build a data-driven business case for Human Risk Management.
