TOP REASONS

Why customers use Mimecast with Office 365:

1 Stops Phishing

“Users get peace of mind that they are better protected. Mimecast is another layer of security. It complements the control we already had and gives reassurance we are well protected against increasingly sophisticated threats.” - Kieran Croucher - IT Infrastructure Manager, DAC Beachcroft

“Email security is everything to our organization. We receive thousands of emails daily and can't rely on our customers, partners, and suppliers to employ the latest cybersecurity measures. We turned to Mimecast to keep our company safe from the growing number of phishing, malicious and social engineering attacks.” - Bob Sampson, Head of IT, Bray Solutions

“If you are using Microsoft 365, you can't assume enterprise grade threat protection. You need Mimecast to give you the level of protection you need.” - Ben Tobgui, Group IT Operations Manager, Forever New

2 Provides True Backups

“Pairing Microsoft 365 with Mimecast is a perfect fit. Mimecast, as a single provider, enables a multilayered approach to security, archiving and disaster recovery.”

- Louis van der Walt - Server Infrastructure Manager, Clover Industries

“With Mimecast, we've been able to streamline all processes for greater efficiency and time savings overall. We've even been able to eliminate our need for backups thanks to integration with Office™ 365 and Mimecast.”

- Colby Grueber, Infrastructure Director, Mohawk Industries

3 Improves Administrator Efficiency

“I have never looked back since using Mimecast, really! Just knowing that Lagan's email would be hosted securely with Mimecast left me free to focus on more strategic projects and the service became, if you like, an insurance policy for me. My stress levels have reduced considerably after we took the decision to go with Mimecast!”

- Information Systems Manager for the Lagan Group, Jim Fennell

“Using Microsoft 365's security tools would have required a lot of configuration work and additional licenses. Mimecast takes all that heavy lifting off the table. And, we can manage both web and email security through a single console, so it's much easier to manage.”

- Arie Taal, Chief Information Security Officer, Royal Auris Group

4 Eases the Transition to Office 365

“We chose Mimecast to de-risk our move to cloud email. It was the ideal solution, giving us a secure cloud archive, outstanding gateway security and easy to use continuity in the event our server went down. What's more, with centralised management, it saved us a lot of support and maintenance time.” - Mark Shear, IT Manager, United Synagogue

5 Ensures No Downtime

“By integrating that with email security and continuity, Mimecast made us feel a lot more confident about moving forward with M365.”

- Mark Shear, IT Manager, United Synagogue
