

# Mimecast Email Security Cloud Gateway

- Easily secure complex email environments
- Integrate with and extend your security ecosystem
- Get world-class email security efficacy
- Customize policies

## Your must-have, AI-powered email security & resilience companion for M365 & Google Workspace

Email-based cyber threats continue to be one of the biggest risks organizations face. From phishing and ransomware to credential harvesting and zero-day attacks, the volume and sophistication of threats targeting your most essential communications tool continues to grow. Your work surface is now your risk surface.

Secure even the most complex email environments, customize policies to meet your specific needs, and extend protections through a range of complementary solutions with Mimecast Email Security Cloud Gateway (CG). A Secure Email Gateway in the cloud, it uses AI-powered detection to defend against the most sophisticated attacks, while integrating seamlessly with M365 and Google Workspace to bolster defenses and achieve complete protection.

### Protect the top attack vector

As the leader in email security for 20 years, Mimecast offers industry-leading detection and world-class efficacy trusted by 42,000 customers globally. By applying the right detection capabilities at the right time, Email Security CG surrounds your communications with continuous protection to block the most sophisticated threats, from phishing and ransomware to quishing and zero-day threats.

The industry's most robust view of the email threat landscape – derived from Mimecast's inspection of 1.7 billion emails daily – powers instantaneous blocking of the vast majority of email-based attacks, while the latest in AI and Machine Learning provides intelligent detection of both emerging and unknown threat types.

### Key Benefits:

- Secure any type of email environment - M365, Google Workspace, on-premise, cloud, hybrid
- Block the most dangerous threats with AI-powered detection
- Customize policies to meet your specific needs
- Easily manage large and complex email environments – AAA, FAA, frequent M&A
- Extend and simplify email protection with fully integrated, complementary solutions
- Easily integrate Mimecast with your larger security ecosystem

Emails inspected by Mimecast daily, giving us the industry's most robust view of the email threat landscape.

“Our global platform is often changing through mergers and acquisitions. We need partners that can scale with us and stay flexible.”

Erik Hart, Chief Information Security Officer  
Cushman & Wakefield

## Advanced phishing, impersonation, and malware protection

Mimecast applies a multi-layered inspection process to all inbound and outbound emails, using AI-driven detections to block dangerous and time-wasting content. Key capabilities include:

### URL re-writing of all links in emails

### Attachment scanning, including static file analysis and pre-emptive sandboxing

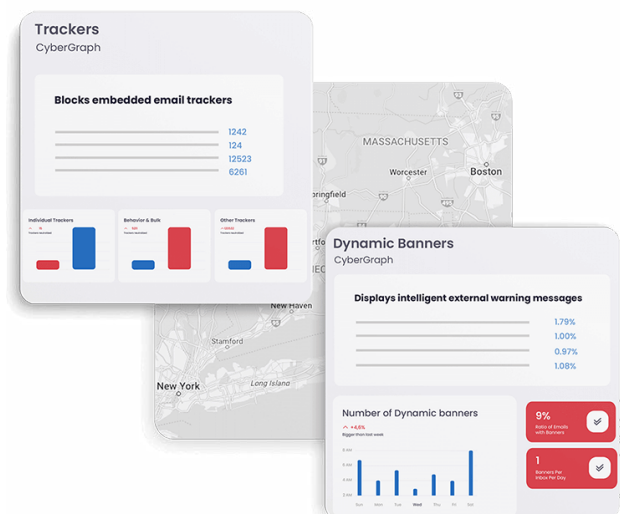

### Protection against social engineering, homoglyph/homograph deception, and impersonation attacks

## Secure even the most complex email environments

Email Security CG provides flexible and effective tools for managing large or complex email infrastructures, allowing for individual domains or divisions that require segmentation or separation of administrative duties — but with control retained by top-level administrators. Flexible policy inheritance ensures group or corporate level policies replicate down to regional or divisional business accounts.

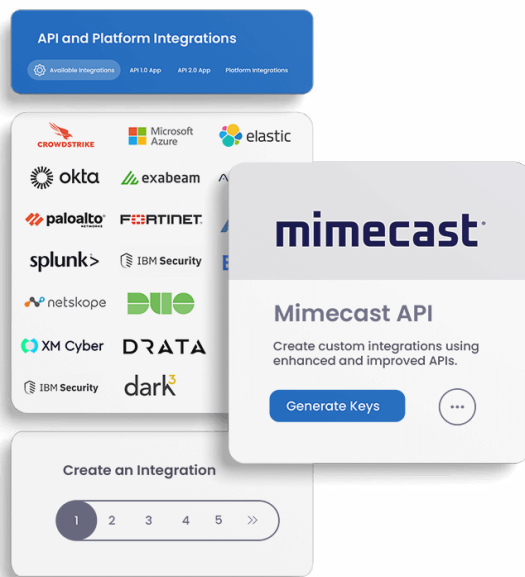

## Limit attacker reconnaissance and empower employees with AI-driven warning banners

Email Security CG protects employees all the way down to the point of risk, applying Social Graphing to map communications patterns, identify anomalies, and detect attacks that use techniques like file-less malware and social engineering. AI-powered warning banners are then applied only to emails that warrant them and updated in real-time across devices when risk levels change. The solution also detects and alerts employees to potentially misaddressed emails and removes embedded email trackers that can reveal details, like the user’s physical location, that can be used to create highly-targeted attacks.

## Easily integrate Mimecast with your larger security ecosystem

Email Security CG accelerates and simplifies integration with other security technologies, such as SIEM, SOAR, TIP, XDR, and more. Integrating Mimecast with your other solutions and sharing intelligence from the top attack vector — email — is fast and easy, opening up endless opportunities to accelerate detection, speed response, reduce manual effort, and optimize investments.

## Defend against QR code attacks

Email Security CG detects QR codes in the body of an email and in attachments and applies deep scanning to the associated URL to protect employees against this growing attack type. Advanced spam filtering further enhances QR code protection.

## Enhance protection with fully integrated, complementary solutions

Our fully integrated, complementary solutions let you address a wide range of challenges simply, effectively, and affordably.

### DMARC management

Get full visibility and control of who sends emails on your behalf by accelerating and simplifying implementation of the DMARC protocol

### Email backup and archiving

Ensure email data is never lost, simplify compliance, and accelerate e-Discovery.

### Awareness Training

Make employees an active part of your defense with award-winning training, risk scoring, and real-life phish testing.

More than 90% of cyberattacks start with email. Get world-class email security designed for your organization's unique needs with Email Security CG.
