Three Crowns LLP Judiciously Engages Mimecast for Cybersecurity and Recovery Needs

Three Crowns LLP is a firm committed to excellence in international arbitration and international law and is at the forefront of significant commercial, investment, and inter-State arbitral cases of the past decade. The firm believes international disputes call for focused advice and advocacy. As a result, Three Crowns is often faced with arbitrating cases against known nation state actors, and the company's IT team must guard against both physical and cybersecurity attacks.

Customer Vision

Three Crowns must protect against the most significant cybersecurity attacks that may come from many different angles, including public Wi-Fi, ransomware, and phishing attacks. "Given the sensitive nature of the work we do, our attorneys must be ever vigilant, and our IT teams are constantly educating them on the growing cybersecurity threats." said Nick Meshew, Head of Information Technology at Three Crowns LLP.

"We need to stay a step ahead of serious threats, so we engaged Mimecast to help with growing email threats, advanced threat protection and sync and recovery to quickly and accurately recall emails to help with the eDiscovery process."

At a Glance

Three Crowns LLP is an international arbitration and international law firm at the forefront of significant commercial, investment, and inter-State arbitral cases.

Problem

Faced with aggressive attacks from nation states, Three Crowns LLP needed a cybersecurity partner that could protect them against the most potent cybersecurity attacks, while providing sync and recovery solutions to help with eDiscovery.

Solution

Email Security, Archiving with Sync & Recover for Exchange and Office 365, Secure Messaging and Internal Email Protect.

Benefits

- Outstanding email protection that is constantly up and running against the gravest cybersecurity threats.
- Ability to easily recover Office 365 in the case of an attack and easy recall of emails for eDiscovery.
- Easy integration with other leading cybersecurity solutions.

**"Three Crowns LLP Builds Strong
Cybersecurity Defence with Mimecast"**

Customer Strategy

Not wanting to solely rely on Microsoft Office 365 for email security and continuity, Meshew engaged Mimecast and has never looked back. Like other international law firms, Three Crowns was not immune to email-based attacks. "A massive majority of threats were coming via email and Mimecast Email Security has blocked and stopped the majority of these threats from reaching our end users," says Meshew. After having success with Mimecast's Email security solution, the firm also deployed Sync and Recovery to help with eDiscovery, as many of the firm's legal documents are delivered through email.

"Mimecast is one of my favorite products, and I have been working in IT for more than 20 years. Our relationship with Mimecast is more than just a client-vendor relationship, Mimecast is a partner and has our back."

Nick Meshew
Head of Information Technology at Three Crowns LLP

Meshew also appreciated Mimecast's significant API partnerships, as the firm was already engaged with CrowdStrike, a Mimecast API partner. Integrating Mimecast's email security was easy for the IT team and provided excellent email security protection. "We integrated CrowdStrike with Mimecast to improve our visibility of vulnerability and threat sharing and to better analyze logs for security instances," says Meshew. "We can view any threats in the Mimecast Threat Dashboard and will better understand the nature of the

threat, including who was targeted, when they were targeted, as well as forensic information about the malware. It's a big help to us."

Customer Outcome

Three Crowns is poised to prevent major cyberattacks and has witnessed Mimecast preventing a number of cyberthreats. "Mimecast's cybersecurity solutions are so easy to use and give us unprecedented agility to fight against advanced cybersecurity email attacks," says Meshew.

In addition, Meshew appreciates Mimecast's Sync and Recovery solutions, which provides added insurance from Microsoft Office 365's backup recovery solution. "It's really important for our firm to have a technology solution to recover our data," says Meshew. "We wanted more than Microsoft Office 365 could provide, so we engaged Mimecast and appreciate not only Mimecast's Continuity, but also the solutions document management system." Meshew adds, "Mimecast is one of my favorite products, and I have been working in IT for more than 20 years. Our relationship with Mimecast is more than just a client-vendor relationship, Mimecast is a partner and has our back."

"We integrated CrowdStrike with Mimecast to improve our visibility of vulnerability and threat sharing and to better analyze logs for security instances."
