

# Be Smart, Be Connected, Be Ready – Be Resilient with Mimecast

Large and complex organizations, by their very nature, face complex cybersecurity challenges. Email remains the top attack vector, and securing it has never been more critical. However, with so many employees, devices, and attack vectors to protect, an integrated cyber resilience strategy is a must.

Mimecast's Email Security 3.0 strategy provides best-in-class security for your top attack vector, while also extending protections beyond your email perimeter to shut down multi-vector threats that seek to exploit an expanding range of digital channels. Fully integrated for both visibility and simplicity — and easy to integrate into your larger security ecosystem — the platform helps you navigate the challenges of today, while also providing solutions that can keep pace with a rapidly evolving threat landscape.

## Be Smart

There's no question that attackers are getting smarter. Threat sophistication is rising, and highly targeted attacks are becoming easier and easier to create. Fight back with security that gets smarter too. Powered by identity graphing and machine learning, Mimecast's Email Security service recognizes patterns and anomalies, limits attackers' ability to create targeted attacks, and empowers your users to make better, smarter decisions too.

- Prevent the exploitation of embedded email trackers
- Detect highly targeted phishing attacks
- Empower users at the point of risk

## Why Mimecast?

- Best-in-class cloud-based email security
- Comprehensive, fully integrated platform
- Security that extends across the top attack vectors
- Rapid remediation
- Secure, impermeable data protection
- Zero email down time

## Be Connected

The complexity of most organizations' security ecosystems is hard to overstate. Disparate systems make visibility difficult to achieve and place a heavy burden on already overtaxed security resources. Make your technologies add up to more than the sum of their parts through the Mimecast API. With over 75 integrations and the ability to easily create your own, connecting Mimecast to your other systems and making the most of threat intelligence from your top attack vector is fast and easy.

- Improve efficiency with low-effort, high impact API integrations
- Get more from your investments — without adding cost
- Free up your team to focus on the most critical tasks

## Be Ready

Understanding your risk posture and staying ahead of threats is half the battle when it comes to building your cybersecurity strategy. The ability to minimize damage and recover quickly when things do go wrong is equally important. Be ready with Mimecast. Threat intelligence presented in the context of your specific environment, risk scoring, rapid remediation capabilities, and managed incident response help you stay one step ahead.

- Accelerate incident response and lower the dwell time
- Get threat intelligence derived from a cloud-based, global grid
- Benefit from instant updates that help protect against emerging threats

## Be Resilient

Being 100% cyber secure is a tough ask in today's environment. You need the most sophisticated protection you can get, combined with the ability to keep your organization running no matter what comes your way. **Be Resilient with Mimecast.**
