mimecast

Human Risk Command Center

Gain complete human risk visibility and protection across your organization

The Problem

Today's attacks are increasingly sophisticated, featuring extensive personalization and targeted strategies. As threat actors evolve, security teams struggle to predict their next moves, making it hard to identify vulnerable employees.

To reduce human risk, organizations need comprehensive visibility into employee behavior, the threats they encounter, and adaptive policies. This shift from reactive to proactive security enhances overall defense.

Use Cases

Identify vulnerable employees
Mimecast surfaces difficult-to-detect human risk through analysis of email behavior, sensitive data handling, security awareness metrics and risky actions from endpoint and identity tools.

Mitigate against repeat offenders
Mimecast enables adaptive security by continuously analyzing individual risk profiles to automatically adjust policy controls based on real-time behavior patterns.

Optimizing security awareness
Mimecast correlates training completion with actual security behaviors, providing evidence of which training modules improve security posture and which fail to change behavior.
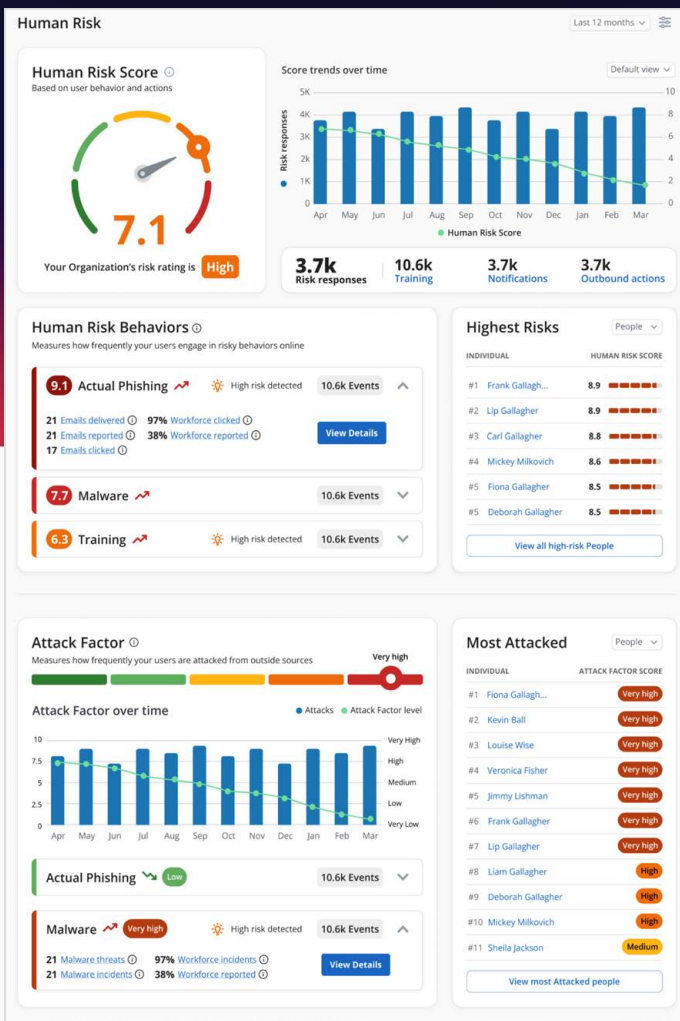

Features

- **Human risk score** delivers comprehensive assessment across your organization.

- **Risk analysis** provides actionable insights and trend analysis.

- **Individual risk profile** tracks user-specific behaviors to identify concerning patterns.

- **Integrate** with your existing security investments to create unified risk visibility.

- **Automates threat mitigation** through customized interventions (Requires Mimecast Engage).

- **Adaptive policies** automatically adjust security controls based on real-time risk levels.

Mimecast Value

- **Measure organizational risk** - Uncover your full spectrum of potential risk.
- **Empower your workforce** - Make employees part of the solution.
- **Protect your organization** - Secure the tools where work happens.
