

See why others have switched from Proofpoint

Proofpoint's walled garden approach and tuning-heavy tools means you spend more time setting up policies than managing risk. Mimecast's Incydr platform offers an open approach, with more integrations and a focus on taking action.

42,000+

Organization trust Mimecast to protect their people and data

255%

ROI over 3 years from enhanced visibility and platform ease-of-use

350+

Native integrations across your security stack

The Total Economic Impact™ of Mimecast, Forrester Research, Inc., July 2024.

5 Reasons to switch from Proofpoint

1 — Comprehensive Risk Detection

Incydr detects data exfiltration and risky insider behavior from day one across email, cloud, and collaboration tools — no policy setup, no blind spots, and no tuning required.

2 — Smarter Correction

Incydr provides a wide range of adaptive controls from education to blocking to balance security with productivity — offering more flexibility that fits how users work.

3 — Automate Your Way

Incydr offers the choice of its dedicated Mihra AI agents or lets customers BYO LLM AI agents with Mihra MCP Gateway — speeding workflows and offering flexibility not available with Proofpoint.

4 — Deployment Flexibility

MX gateway, API, or both — same detection engine regardless of how you deploy. Proofpoint's MX and API run on different acquired technologies. Mimecast gives you one platform, freedom of choice.

5 — Power of the Platform

350+ native integrations with CrowdStrike, Microsoft, Netskope, Splunk, and SIEM/SOAR tools to see and manage human risk — not a walled garden approach of Proofpoint.

Trusted by 42,000+ customers globally. Seamless migration, dedicated support, and better security from day one
