mimecast®

Human risk is today's biggest cybersecurity gap and remains largely unaddressed.

74%
of all cyber breaches are caused by human factors — errors, stolen credentials, misuse of access privileges or social engineering
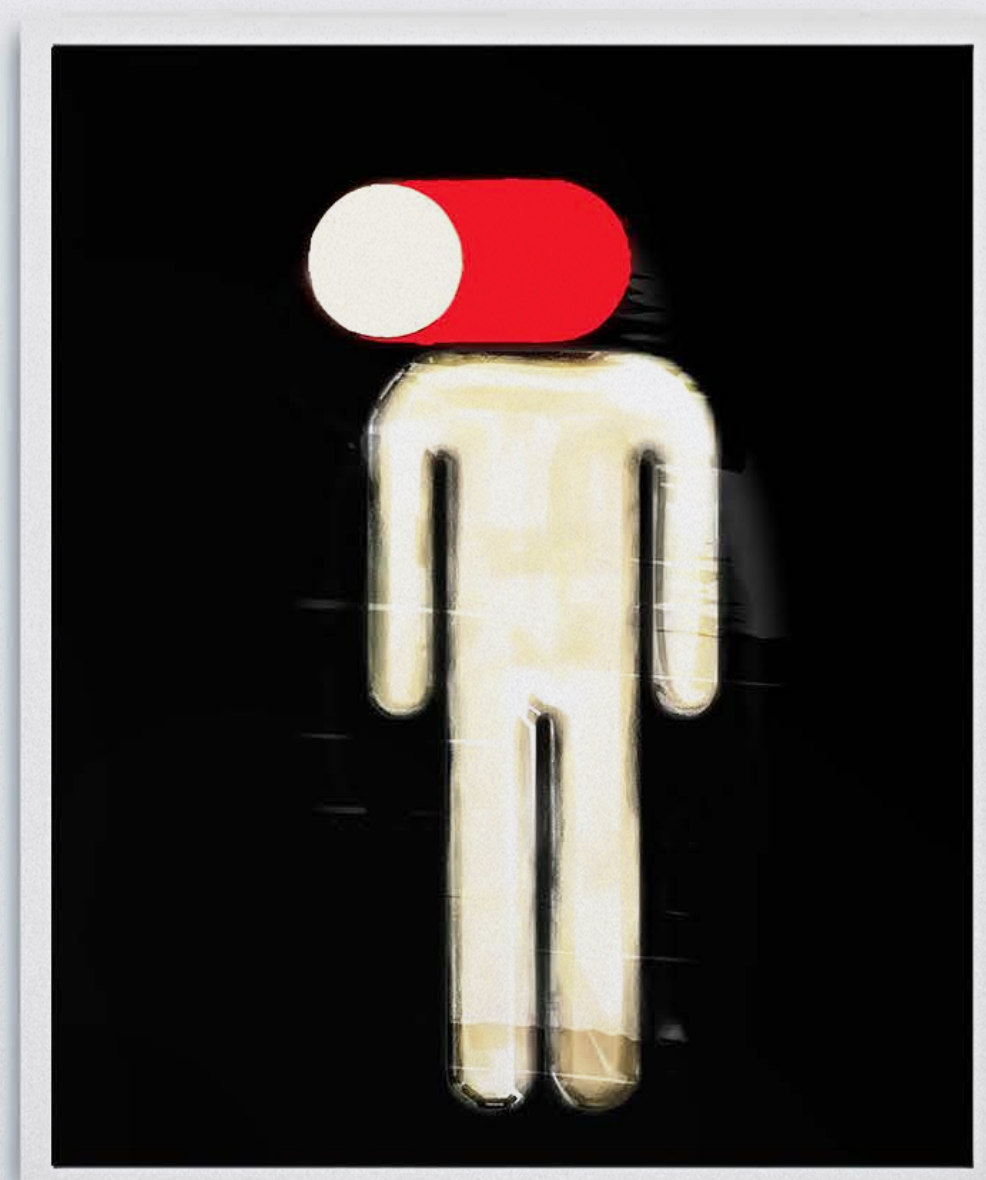

75%
say their company is at risk of inadvertent data leaks by careless or negligent employees

80%
of security incidents are caused by just 8% of users

>2/3
believe that employees are putting the organization at risk through the misuse of email, oversharing companyinformation on social media and careless web browsing

Reduce Human Risk at its Source
