# The Mimecast Incydr experience:
How security teams regain visibility without losing trust

Today's security landscape poses a tough balancing act. You have to protect sensitive data while maintaining productivity and accelerating innovation. But with data moving freely across generative AI tools, cloud apps, and endpoints, traditional security controls often create more noise while leaving critical blind spots.
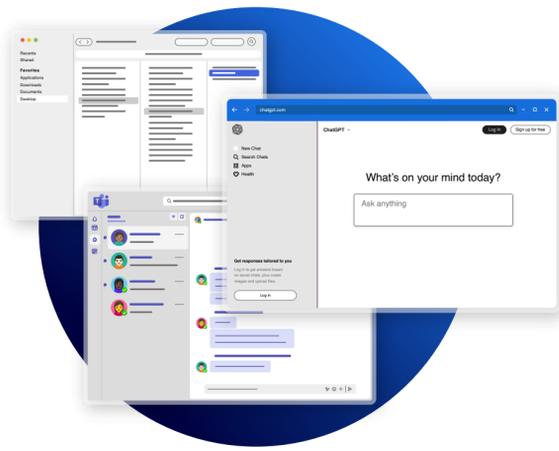

Organizations face a harsh security reality.
Pressure comes from multiple directions at once:

- Shadow AI is rampant and increases risk of data loss
- Limited visibility into how and where data is moving
- Increased use of cloud and unsanctioned collaboration tools
- Frustrated employees find workarounds to security roadblocks
- Data movement blind spots leave teams reacting instead of preventing
- DLP alerts can become overwhelming for teams to manage
- Traditional DLP controls conflict with business innovation

Mimecast Incydr customers get a fundamentally different experience

Mimecast Incydr changes the game, making insider risk visible, manageable, and actionable without compromising your agility or company culture. For customers, Incydr is more than a control, it becomes a trusted operational layer. Incydr customers can:

- Gain real-time visibility into all data movement — no policy setup required
- See shadow AI details and ensure adherence to acceptable use policies
- Visualize your organization's data flows with CISO-friendly dashboards
- Adapt data protection as risk changes using watchlists for at-risk users
- Apply adaptive controls from education to blocking and everything in-between
- Stop intellectual property like source code from walking out the door
- Speed investigation workflows and cut alert volume using agentic AI
- Natively connect to cloud and email systems for maximum visibility and control
- Integrate HCM, EDR, and IAM/PAM systems to add risk context and automate responses
- Scale securely using APIs, SDK, and pre-built integrations
- Cut data protection overhead and achieve ROI in <6 months

"We went from not really understanding anything about what was going on with our data, to seeing everything with Incydr... down to the minutiae."

Jae Ward, Security Analyst at Lyft

"It has been one of the easiest deployments we've ever had to manage. The upgrades are quite simple as well. We now have a solid platform for protecting and controlling our users' data."

Administrator, Technology Company

"We were able to make sure we had the capabilities to monitor data exfiltration, see publicly-shared things that shouldn't be shared — these are big concerns for every company."

Matheo Lord-Martinez, IT Security Director at Okta

The Incydr difference: Get protection and progress

With an approach centered on visibility, collaboration, and speed, Incydr lets your security team focus where it matters most and deliver meaningful ROI in months, not years. Get ahead of insider risk and stop data exfiltration from every modern work channel using one solution.
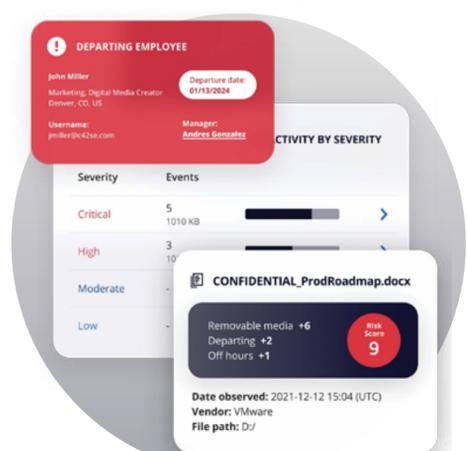

Discover how to take action and cut insider risk.
